

### Area of application

ESSVE Strap tensioner is used to tighten ESSVE Strapping band 25 to 60 mm in connection with installation.

### Description

The strap tensioner is made of steel. It is fitted with a rubber handle for the counterhold and

tightening of the strapping band for further working.

### Installation

The free end of the is inserted into the Strap tensioner and secured with e.g. an Anchor nail. With the Strap tensioner set up on the counterhold, e.g. the side of the batten, the strapping band is tightened and then secured.
