

Area of application

ESSVE Post tie is intended for anchoring posts and frames to foundations or concrete structures.

e.g. concrete.

Description

The post tie is made of hot dip galvanized steel. The upper part of the Post tie is equipped with two bolt holes and the lower part forms a fork for optimal fastening when cast in

Installation

The post tie is cast with the split part in the concrete. The post or framework is mounted using two bolts in the existing holes.

Specification

Material	Steel
Surface treatment	Hot dip galvanized 50 µm
Corrosion category	C3
Material thickness	6.0 mm and 8.0 mm
Bolt hole	Ø10.0 mm and Ø12.0 mm

Post tie, hot dip galvanized
